SLC6 PRO
ALL-IN-ONE PROCESSOR

Introduction

The SLC6 Pro is an all-in-one processor combining video processing and video control functionalities into a single device. Equipped with 10 Ethernet ports, it supports three working modes: video processor, fiber converter, and ByPass. Capable of managing up to 6.5 million pixels, the SLC6 Pro can output at a maximum width of 10,240 pixels and a height of 8,192 pixels, making it perfectly suited for controlling ultra-wide and ultra-high LED screens on-site.

The SLC6 Pro boasts powerful video signal reception and processing capabilities, supporting a maximum resolution of 4K×2K@60Hz for video input. It can handle multiple video signal inputs and includes features like 6 layers, output scaling, low latency and pixel-level brightness and chroma calibration. These functions combine to deliver outstanding image display quality.

With various control options available, the SLC6 Pro can be operated via the front panel knob, web page and Starview app, providing you with a convenient and effortless control experience.

The SLC6 Pro is housed in an industrial-grade casing, which, combined with its powerful video processing and transmission capabilities, makes it robust and well-suited for complex operational environments. The SLC6 Pro is a perfect fit for medium and high-end rental, stage control systems and fine-pitch LED screens.

Features

Multiple connectors, free input and output

- A comprehensive range of input connectors
  - 1x HDMI 2.0 (IN & LOOP)
  - 2x HDMI 1.3
  - 1x 10G optical fiber port (OPT 1)
  - 1x 3G-SDI (IN & LOOP)
  - 1x USB 3.0 (Play images or videos saved in a USB drive.)
- Output connectors
  - 10x Gigabit Ethernet ports

    A single device supports up to 6.5 million pixels, delivering a maximum width of 10,240 pixels and a maximum height of 8192 pixels.
  - 2x Fiber outputs

    OPT 1 sends the output on Ethernet ports 1~10.

    OPT 2 copies or backs up the output on Ethernet ports 1~10.
  - 1x HDMI 1.3

    For monitoring display.
  - 1x 3D connector

    Directly connect a third-party 3D emitter.
- Self-adaptive OPT 1 for either video input or sending card output

  Thanks to the self-adaptive design, OPT 1 can be used as either an input or output connector, depending on its connected device.

- Audio input and output
  - Audio input accompanied with HDMI sources
  - 3.5 mm independent audio input and output
  - Adjustable output volume
- Free topology

  Flexible screen configuration without rectangle restriction on a single Ethernet port. The maximum circumscribed rectangle of the large screen loaded by the device must be within the device loading capacity.

  *Specific receiving cards are required.
- Low latency

  By enabling the low latency feature and ByPass mode, the device delay can be reduced to 0 frame.
- Output synchronization

  An input source connected to the device's video connector or external Genlock source can be used as the sync source to ensure the output images of all cascaded units in sync.
- EDID management

  Import and export EDID files.

Diverse display possibilities for flexible configuration

- Easy preset saving and loading
  - Up to 256 user-defined presets supported
  - Load a preset by simply pressing one button.
  - Save, overwrite and delete a preset.
  - Preview the layer layout saved in the preset.
- Multiple layer display
  - Supports 6*2K×1K layer resources.

    Users can create layers in three different specifications - 4K×2K, 4K×1K, and 2K×1K. These layers will use 4x, 2x, and 1x 2K layer resources respectively, depending on the capacity of the input source connector used to open the layers.
  - Adjustable layer size and position
  - Adjustable layer priority

- Adjustable aspect ratio

- OSD function
  - Supports the text OSD and image OSD. For the text OSD, four components are available, including static text OSD, dynamic text OSD, weather OSD and time OSD.
  - Supports customization of the text content, font, font color, size, opacity and background color.
  - Supports configuration of the scrolling direction, initial position and speed for the dynamic text OSD.

- 3D function
  - Traditional solution: Connect the EMT200 Pro 3D emitter to the device's Ethernet port, and use the compatible 3D glasses to enjoy a 3D visual experience.
  - New solution: Connect the third-party 3D emitter to the device 3D connector and use the compatible 3D glasses to enjoy a 3D visual experience.

  Note: When the 3D function is enabled and the video source format is **Side-by-Side** or **Top-and-Bottom** , the device output capacity will be halved.

- Personalized image scaling

  Supports three kinds of image scaling modes, including full screen, pixel to pixel and custom.

- Powerful video processing
  - Based on SuperView III image quality processing technologies to provide stepless output scaling.
  - One-click full screen display
  - Free input cropping

- Color adjustment

  Supports output color management, including brightness, saturation, contrast and hue.

- Pixel level brightness and chroma calibration

  Work with Starview calibration software to support brightness and chroma calibration on each LED, which can effectively remove color discrepancies and greatly improve LED display brightness and chroma consistency, allowing for better image quality. The function of displaying image on screen for test is also supported.

USB playback, timesaving and effortless

- Supports USB playback for instant plug-and-play convenience.

Multiple device modes and operation modes, convenient and efficient

- Various working modes
  - Video processor
  - Fiber converter
  - ByPass
- Multiple control options
  - Device front panel knob
  - Web page control
  - Starview app
  - Remote control (optional)

    Adjust the screen brightness and output volume, switch presets, set the USB playback parameters, adjust the output image quality, switch layer input sources and set the 3D function through a remote control.

    *For the descriptions of the remote control buttons and functions, please refer to the user manual.

Data saving after power failure and backup design, stable and reliable

- End-to-end backup
  - Backup between devices
  - Backup between input sources
  - Backup between Ethernet ports
  - Backup up between OPT and Ethernet ports
- Ethernet port backup test

  Test whether the pre-stored images, backup Ethernet ports and devices take effect without plugging and unplugging the Ethernet cables.
- Data saving after power failure

  After a normal shutdown or unexpected power outage, reconnecting the power will automatically restore the previously saved settings on the device.
- 24/7 rigorous stability test under extreme high and low temperatures proved robust stability and reliability.

Table 4-1 Function limitations

Function	Limitation	Mutually Exclusive Function
3D	• Work with the matched 3D glasses. • When the 3D function is enabled and the video source format is **Side-by-Side** or **Top-and-Bottom**, the device output capacity will be halved.	• Input crop
Low Latency	All cabinets loaded by Ethernet ports must be aligned at the top of the circumscribed rectangle.	Genlock: When the device works as a video processor, the low latency and Genlock are not exclusive. When the device works in ByPass mode, the two functions cannot be enabled simultaneously.
GENLOCK	N/A	Low latency: When the device works as a video processor, the low latency and Genlock are not exclusive. When the device works in ByPass mode, the two functions cannot be enabled simultaneously.
ByPass Mode	When the device works as an independent LED display processor, the video processing function is unavailable.	N/A
OSD	• The quantity of the text OSD components is as follows. – Static text OSD: 10 – Dynamic text OSD: 1 – Weather OSD: 2 – Time OSD: 2 • The text OSD and image OSD cannot be used together. • The dynamic text OSD and other text OSD components cannot be used together.	Remote control
